

23. Draw a Line Using Axis Values from a Text File

Aim

To write a Python program to read axis values from a text file and draw a line chart with suitable labels and title.

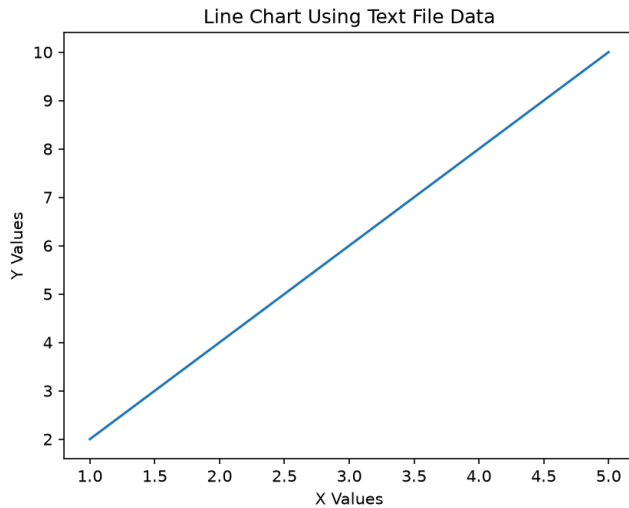

Dataset

X	Y
1	2
2	4
3	6
4	8
5	10

Python code:

```
1 import matplotlib.pyplot as plt
2 x = []
3 y = []
4 # Read values from text file
5 with open("data.txt", "r") as file:
6     for line in file:
7         values = line.split()
8         x.append(float(values[0]))
9         y.append(float(values[1]))
10 plt.plot(x, y)
11 plt.xlabel("X Values")
12 plt.ylabel("Y Values")
13 plt.title("Line Chart Using Text File Data")
14 plt.show()
```

Output:

Result:

The data was successfully read from a text file and represented using a line chart.

24. Draw Line Charts of Financial Data

Aim

To write a Python program to draw a line chart representing financial data.

Dataset

Month	Opening	Closing
Jan	100	105
Feb	105	110
Mar	110	108
Apr	108	115
May	115	120

Month	Opening	Closing
Jun	120	125

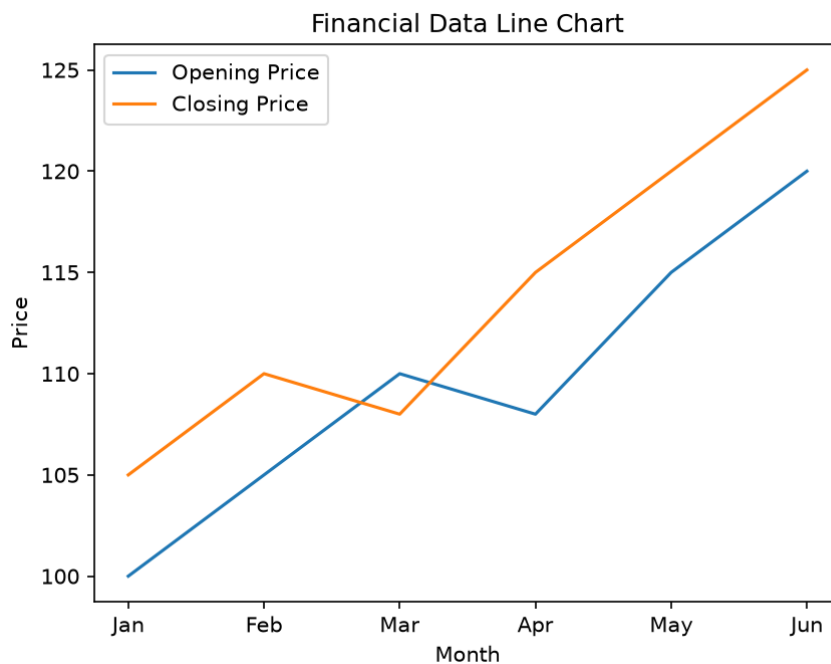

Python code:

```

1 import matplotlib.pyplot as plt
2 month = ["Jan", "Feb", "Mar", "Apr", "May", "Jun"]
3 opening = [100, 105, 110, 108, 115, 120]
4 closing = [105, 110, 108, 115, 120, 125]
5 plt.plot(month, opening, label="Opening Price")
6 plt.plot(month, closing, label="Closing Price")
7 plt.xlabel("Month")
8 plt.ylabel("Price")
9 plt.title("Financial Data Line Chart")
10 plt.legend()
11 plt.show()

```

Output:

Result:

The financial data was successfully represented using line charts.
